

Guide to the Database of Ranking Data in Political Science*

Yuki Atsusaka [†] Shubhangi Singh [‡]

2026-07-14 (Version 0.0.8)

About This Document

How to cite this database

Atsusaka, Y. and Singh, S. 2026. “Ranking Data in Political Science.” *Working Paper*.

What this database is

This is a database of ranking data in political science—a collection of ranking data drawn from peer-reviewed political science studies. It compiles a variety of ranking data originally published in a wide range of formats — full rankings, partial rankings, top- k selections, and related elicitations — from survey experiments and observational surveys into a single common schema. The primary purpose of the database is to allow researchers (both applied and methodological) to analyze and reanalyze these political rankings to draw new insights from the data.

1. Overview

This codebook documents standardized ranking data from published political science studies. All datasets follow a common schema with standardized variable naming conventions (Section 2). Section 4 documents each study.

Document summary

Field	Value
Version	0.0.8
Date	2026-07-14
Studies documented	28
Labeled datasets (see Section 3.1)	46
Standardized files	54
Total observations (primary files)	55,512
Total rows (all 54 files, incl. splits)	69,236
Common schema	<code>unit</code> , <code><items></code> , <code>ranking</code> , <code>treat</code> , <code><covariates></code> (see Section 2)

The 54 files map onto 28 distinct published studies. Several studies contribute more than one file:

- **Multi-wave / multi-task studies** (each file is a distinct data source): Corstange 2022 (2 Syria waves), Bakker, Lelkes & Malka 2021 (GSS 5-item ranking), Atsusaka 2025 (three ballot settings $\times$ full/partial task).
- **Pairwise treatment splits** (subsets of a parent multi-arm file, provided as a convenience for two-arm analysis): Boudreau et al. 2019 (police), Haas & Lindstam 2023, Krupnikov & Levine 2019, Malhotra & Kuo 2008, Nair & Sambanis 2019, and Pradel et al. 2024. There are 20 split files in total; their rows are already counted in their parent files.

The “primary files” observation total (55,512) excludes the 20 pairwise-split files to avoid double counting; the 69,236 figure sums all 54 files.

2. Common Schema and Data Processing

2.1 Data Processing Pipeline

All raw data files were processed using R scripts (R/Standardize_*.R) that:

1. Load raw data from replication packages (.xlsx, .sav, .dta, .RData, .csv).
2. Standardize treatment variables to 0-indexed integers (0 = control, 1+ = treatment arms).
3. Rename each ranking column after the item it represents (e.g., **tribe**, **nationality**), with **no prefix**.
4. Convert all variable names to lowercase and normalize text.
5. Create a unique **unit** row identifier and a **ranking** summary string.
6. Export to CSV format in the **standardized/** directory.

Each standardize script ends with a call to **finalize_csv()** (in R/finalize_schema.R), which enforces the canonical column layout and (re)builds the **ranking** string. The function is idempotent.

Schema change from v1.0. Version 1.0 of this codebook documented an earlier schema in which ranking columns carried a **ch_** prefix and each row included an **id** column. The current schema (v2.0) drops the **ch_** prefix, drops the **id** column, and adds a single **ranking** summary string placed immediately before **treat**. One derived-ranking file (**pedersen-2025.csv**) is documented here in its legacy layout; see Section 5.

2.2 Common Variable Schema

Every file follows the column order below:

Position	Variable	Type	Description
1	unit	Integer	Unique row number within the dataset (sequential from 1)
2 ... (1+J)	<i>item columns</i>	Numeric	One column per ranked item, named after the item (no prefix). Value = the rank the respondent assigned to that item.
2+J	ranking	String	Single-string summary of the row's ranks (see Section 2.3)
3+J	treat	Integer	Treatment assignment (0 = control; 1, 2, 3 ... = treatment arms)
4+J ...	<i>covariates</i>	Various	Study-specific demographics, design variables, and other measures

Item columns encode ranks in a study-specific way that we classify into four **ranking types**:

Type	Meaning
full	Every item receives a distinct rank $1..J$; no missing ranks.
partial	Only the top- m items are ranked $1..m$; the remaining items are NA.
indicator	Item columns are 0/1 dummies for a top-1 (or top- k) pick, not ranks.
marginal	Only one item's rank is meaningful per row (e.g., a single marginal item elicited under a factorial design); other items are NA.

2.3 The ranking Column

ranking is a compact, one-character-per-position summary of a row's item ranks. Each item position gets exactly one character — a digit (1–9) if that item has a rank, or - if it is NA / not picked. There is no separator between positions, and the character order matches the item-column order.

File category	Example
Full ranking, $J < 10$	$J = 4$ row (1, 3, 4, 2) $\rightarrow$ "1342"
Partial ranking, $J < 10$	$J = 5$ row (1, NA, 2, NA, NA) $\rightarrow$ "1-2--"
Partial ranking, $J \geq 10$ (rank values still 1–9)	(1, NA, NA, 2, NA, ..., 3, NA) $\rightarrow$ "1--2-----3-"
Indicator (top-1 dummies)	row (1, 0, 0, 0) $\rightarrow$ "1---"
Marginal (only first column has rank info)	row (3, NA, ..., NA) $\rightarrow$ "3-----"

For files whose maximum rank exceeds 9 (the full 1–10 Oakland ranking, `atsusaka-2025-oakland-full.csv`), a single-character-per-position string is not well defined; **ranking** is set to NA for that file by design and users should read the item columns directly.

3. Dataset Index

3.1 Datasets by Label

The database is organized into **46 labeled datasets** — the analysis-ready units used throughout the accompanying manuscript. Each label names a single standardized file and is grouped into one of three subfields: American politics (AP), comparative politics (CP), and international relations (IR). “Partial” marks datasets that record partial rather than complete rankings (this includes partial, top- k , indicator, and marginal elicitations).

Label	J	Topic	Area	Partial	Study	File
toxic-group	4	social media	AP	—	Pradel et al. (2024)	pradel-etal-2024-groupef
toxic-intolerant	4	social media	AP	—	Pradel et al. (2024)	pradel-etal-2024-intoler

Derived files not separately labeled. Seven standardized files remain in `standardized/` but are *not* among the 46 labeled datasets, because each is a multi-arm parent from which the labeled pairwise splits are derived (or a redundant variant): `boudreau-etal-2019-police.csv`, `haas-lindstam-2023.csv`, `krupnov-levine-2019.csv`, `malhotra-kuo-2008.csv`, `nair-sambanis-2019.csv`, `pradel-etal-2024.csv` (the six multi-arm originals), and `pradel-etal-2024-threatening-new.csv` (a fifth toxic-speech split superseded by `toxic-threat`). They are retained for convenience but are not counted in the headline 46.

3.2 Studies

One row per study (primary file). “Files” counts all standardized files contributing to that study, including waves, tasks, and pairwise splits.

#	Study	Yr	Jrnl	J	Type	N (primary)	Arms	Files

4. Per-Study Documentation

Each entry gives the file(s), sample size, ranking items, ranking type, and treatment coding. Item columns appear in file order. Covariates are summarized rather than exhaustively enumerated; consult the CSV headers for the complete covariate list.

Study 1: Andersen & Moynihan (2016)

File name: andersen-moynihan-2016.csv

Label: goals

Number of obs: 230

Number of items: 3

Type: indicator

Arms: 4

Citation: Andersen, S. C. & Moynihan, D. P. 2016. "Bureaucratic Investments in Expertise: Evidence from a Randomized Controlled Field Trial." *The Journal of Politics* 78(4): 1032–1044.

DOI: <https://doi.org/10.1086/686029>

Ranking task: Educators were asked to rank three educational goals. Only a top-1 indicator for student well-being is present in the released data; the **achievement** and **inclusiveness** positions are not recorded (NA). **treat** is an information $\times$ discretion factorial.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
wellbeing	Binary	1 = ranked student well-being as top priority, 0 = otherwise
achievement	Integer	Rank of academic achievement (not recorded in released data; NA)
inclusiveness	Integer	Rank of inclusiveness (not recorded in released data; NA)
ranking	String	Compact top-1 indicator summary (e.g. "1--")
treat	Integer	Treatment arm (0 = control; 1–3 = information $\times$ discretion factorial)
informationtreatment	Binary	Information-treatment indicator
discretiontreatment	Binary	Discretion-treatment indicator
group1	Binary	Design/blocking group indicator

Study 2: Atsusaka (2025) — Ballot Design

Number of items: 4 (Senate, House) / 10 (Oakland)

Type: full and partial

Arms: 1 (no experiment)

Citation: Atsusaka, Y. 2025. “Analyzing Ballot Order Effects When Voters Rank Candidates.” *Political Analysis* 33(1): 64–72.

DOI: <https://doi.org/10.1017/pan.2024.9>

Ranking task: Six files from a study of ranked-ballot designs across three ballot settings, each elicited as both a **full** ranking and a **partial** (top-3) ranking. **treat** = 0 for all rows; within-respondent display-order randomization is preserved in **display_order**.

File	Setting	J	Type	N
atsusaka-2025-senate-full.csv	Senate	4	full	354
atsusaka-2025-senate-partial.csv	Senate	4	partial (top-3)	354
atsusaka-2025-house-full.csv	House	4	full	354
atsusaka-2025-house-partial.csv	House	4	partial (top-3)	354
atsusaka-2025-oakland-full.csv	Oakland	10	full (1–10)	259
atsusaka-2025-oakland-partial.csv	Oakland	10	partial (top-3 RCV)	259

Labels (in table order): senate-2022, senate-2022-partial, house-2022, house-2022-partial, oakland-2022, oakland-2022-partial.

Items — **Senate:** chesbro, kelley, murkowski, tshibaka. **House:** begich, bye, palin, peltola. **Oakland:** scott, hodge, taylor, liu, thao, delafuente, villanueva, reimann, jordan, reid.

Variables (common schema across the six files)

Variable	Type	Description
unit	Integer	Unique observation ID
candidate columns	Integer	Rank assigned to each candidate (1 = top choice); item set differs by setting (see above). Unranked candidates in partial files are NA
ranking	String	Compact rank summary (NA for <i>atsusaka-2025-oakland-full.csv</i> , which uses two-digit ranks 1–10)
treat	Integer	0 for all rows (no experiment)
display_order	String	Randomized display order of candidates shown to the respondent

Study 3: Atsusaka & Kim (2025)

File name: atsusaka-kim-2025.csv

Label: identity

Number of obs: 1,082

Number of items: 4

Type: full

Arms: 1 (no experiment)

Citation: Atsusaka, Y. & Kim, S. S. 2025. “Addressing Measurement Errors in Ranking Questions for the Social Sciences.” *Political Analysis* 33(4): 339–360.

DOI: <https://doi.org/10.1017/pan.2024.33>

Ranking task: Respondents ranked four social/political identities from 1 (most important) to 4 (least important) via drag-and-drop; every row is a valid 1–4 permutation. `treat` = 0 for all respondents (methodological study, no experimental manipulation).

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID (1–1,082)
<code>partisan</code>	Integer	Rank assigned to partisan identity (1 = most important ... 4 = least)
<code>religious</code>	Integer	Rank assigned to religious identity (1–4)
<code>gender</code>	Integer	Rank assigned to gender identity (1–4)
<code>racial</code>	Integer	Rank assigned to racial/ethnic identity (1–4)
<code>ranking</code>	String	Compact 1–4 permutation of the four item ranks, in column order (partisan, religious, gender, racial)
<code>treat</code>	Integer	Treatment assignment; 0 for all rows (no experiment)
<code>anc_federal</code>	Integer	Anchor (known-answer) ranking task: rank assigned to “federal”
<code>anc_state</code>	Integer	Anchor ranking task: rank assigned to “state”
<code>anc_municipal</code>	Integer	Anchor ranking task: rank assigned to “municipal”
<code>anc_school</code>	Integer	Anchor ranking task: rank assigned to “school district”
<code>anc_correct_identity</code>	Binary	1 = respondent gave the correct anchor ordering (data-quality check), 0 = otherwise
<code>s_weight</code>	Numeric	Survey sampling weight
<code>age</code>	Integer	Respondent age in years
<code>birthyr</code>	Integer	Year of birth

Variable	Type	Description
<code>gender_resp</code>	String	Self-reported gender (Man / Woman / Other / Prefer not to say)
<code>female</code>	Binary	1 = female, 0 = otherwise
<code>race</code>	String	Race/ethnicity (8 categories)
<code>race4</code>	String	Race/ethnicity collapsed to 4 categories
<code>hispanic</code>	String	Hispanic identification (Yes / No)
<code>educ</code>	String	Education (6 categories)
<code>educ4</code>	String	Education collapsed to 4 categories
<code>pid3</code>	String	Party identification, 3-category
<code>pid7</code>	String	Party identification, 7-category
<code>ideo7</code>	String	Ideological self-placement, 7-category
<code>religpew</code>	String	Religious affiliation (Pew categories, 12)
<code>faminc_new</code>	String	Family income bracket (17 categories)
<code>region</code>	String	Census region (Northeast / Midwest / South / West)
<code>inputstate</code>	String	State of residence (50 states + DC)
<code>item_order</code>	String	Randomized display order of the four identity items (Qualtrics <code>randomize(...)</code> string)

Study 4: Bakker, Lelkes & Malka (2021)

File name: bakker-etal-2021.csv

Label: parenting

Number of obs: 2,490

Number of items: 5

Type: full

Arms: 3 (GSS panel waves)

Citation: Bakker, B. N., Lelkes, Y. & Malka, A. 2021. “Reconsidering the Link Between Self-Reported Personality Traits and Political Preferences.” *American Political Science Review* 115(4): 1482–1498.

DOI: <https://doi.org/10.1017/S0003055421000605>

Ranking task: GSS 2006-panel Stenner child-rearing-values ranking, three waves stacked; respondents rank five qualities 1 (most important) to 5 (least). `treat` = panel wave. Bakker et al. use only `obey` and `thnkself`; the PRD standardizes the full 5-item ranking.

Note: an earlier 8-item forced-choice Likert experiment file was dropped (2026-07-14) because it is not ranking data (four mirror-image 1–5 Likert pairs, every row tied), leaving the GSS ranking as the sole Bakker file.

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID (respondent $\times$ wave)
<code>obey</code>	Integer	Rank of “to obey” (1 = most important ... 5 = least)
<code>thnkself</code>	Integer	Rank of “to think for oneself” (1–5)
<code>workhard</code>	Integer	Rank of “to work hard” (1–5)
<code>helpoth</code>	Integer	Rank of “to help others” (1–5)
<code>popular</code>	Integer	Rank of “to be well liked or popular” (1–5)
<code>ranking</code>	String	Compact 1–5 permutation of the five item ranks
<code>treat</code>	Integer	GSS panel wave (0 = 2006, 1 = 2008, 2 = 2010 re-interview)
<code>wave</code>	Integer	Panel wave (1/2/3), same information as <code>treat</code> + 1

Study 5: Boudreau, Elmendorf & MacKenzie (2019) — Mayoral

File name: boudreau-et-al-2019-mayoral.csv

Label: roadmap

Number of obs: 1,593

Number of items: 11

Type: partial (top-3 RCV)

Arms: 5

Citation: Boudreau, C., Elmendorf, C. S. & MacKenzie, S. A. 2019. “Racial or Spatial Voting? The Effects of Candidate Ethnicity and Ethnic Group Endorsements in Local Elections.” *American Journal of Political Science* 63(1): 5–20.

DOI: <https://doi.org/10.1111/ajps.12401>

Ranking task: Respondents ranked up to three of the 2011 San Francisco mayoral candidates (ranked-choice ballot); ranks are recovered from the top-3 selections (choice-order inverted). Unranked candidates are NA.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
adachi, aliotopier, avalos, chiu, dufty, hall, herrera, lee, rees, ting, yee	Integer	Rank assigned to each SF mayoral candidate (1–3; unranked = NA)
ranking	String	Compact top-3 rank summary
treat	Integer	0 = control; 1–4 = candidate-ethnicity / ethnic-endorsement information arms
race	Integer	Respondent race/ethnicity (coded)
gender	Integer	Respondent gender (coded)
party	Integer	Party identification (coded)
age	Integer	Age (coded)
educ	Integer	Education (coded)
income	Integer	Household income (coded)
ideo	Integer	Ideology (coded)
interest	Integer	Political interest (coded)
retro	Integer	Retrospective evaluation (coded)

Study 6: Boudreau, MacKenzie & Simmons (2019) — Police

Number of items: 7

Type: full

Arms: 3

Citation: Boudreau, C., MacKenzie, S. A. & Simmons, D. J. 2019. “Police Violence and Public Perceptions: An Experimental Study of How Information and Endorsements Affect Support for Law Enforcement.” *The Journal of Politics* 81(3): 1101–1110.

DOI: <https://doi.org/10.1086/703540>

Ranking task: Full 1–7 blame ranking of officials/actors in an information-framing experiment about the 2018 Stephon Clark shooting (Sacramento). One parent file plus two pairwise splits.

File	Comparison	N
boudreau-etal-2019-police.csv	Full 3-arm design (control / pattern / reform)	2,758
boudreau-etal-2019-police-pattern.csv	control (0) vs. pattern framing (1)	1,851
boudreau-etal-2019-police-reform.csv	control (0) vs. reform framing (1)	1,855

Labels: `police-pattern` and `police-reform` (the two pairwise splits). The 3-arm parent `boudreau-etal-2019-police.csv` is a derived file, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>clark, officers, hahn, steinberg, schubert, brown, senators</code>	Integer	Rank assigned to each official/actor (1 = most to blame ... 7)
<code>ranking</code>	String	Compact 1–7 permutation
<code>treat</code>	Integer	0 = control; 1 = pattern framing; 2 = reform framing
<code>county</code>	String	California county
<code>partyid</code>	Integer	Party identification (coded)
<code>race</code>	Integer	Race/ethnicity (coded)
<code>ideo_rating</code>	Numeric	Ideological self-placement
<code>education</code>	Integer	Education (coded)
<code>work_for_law</code>	Binary	Works in law enforcement (0/1)

Study 7: Corstange (2022) — Mass Sectarianism

Number of items: 6

Type: partial (top-3)

Arms: 4

Citation: Corstange, D. 2022. “Mass Dissimulation in the Syrian Civil War.” *The Journal of Politics* 84(3): 1469–1481.

DOI: <https://doi.org/10.1086/717086>

Ranking task: Top-3 sympathy ranking of Syrian civil-war factions, elicited in two survey waves of displaced Syrians. Unranked factions are NA.

File	Wave	N	Arms
corstange-2022-sy2015.csv	Syria 2015	2,000	4
corstange-2022-sy2017.csv	Syria 2017	2,000	4

Labels: syria-2015 and syria-2017 (one per wave).

Variables (common schema; questionnaire numbering differs slightly by wave)

Variable	Type	Description
unit	Integer	Unique observation ID
freesyrianarmy, syriangovernment, syrianislamistgroups, foreignislamistgroups, kurdishgroups, hizbalah	Integer	Rank assigned to each faction by sympathy (top-3; unranked = NA)
ranking	String	Compact top-3 summary
treat	Integer	0 = control; 1–3 = framing arms
mohfz / mohafaza	Integer	Governorate code
caza	Integer	District code
q5-q51z	Numeric	Original questionnaire items (demographics and attitudes); numbering differs by wave — see source questionnaire

Study 8: Corstange & York (2018)

File name: corstange-york-2018.csv

Label: sectarian

Number of obs: 2,000

Number of items: 6

Type: partial (top-3)

Arms: 8

Citation: Corstange, D. & York, E. A. 2018. "Sectarian Framing in the Syrian Civil War." *American Journal of Political Science* 62(2): 441–455.

DOI: <https://doi.org/10.1111/ajps.12348>

Ranking task: Top-3 sympathy ranking of the same six Syrian factions as Study 7, from a sectarian-framing experiment. Unranked factions are NA.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
freesyrianarmy, syriangovernment, syrianislamistgroups, foreignislamistgroups, kurdishgroups, hizbalah	Integer	Rank assigned to each faction by sympathy (top-3; unranked = NA)
ranking	String	Compact top-3 summary
treat	Integer	0 = control; 1 = sect; 2 = democracy; 3 = secular; 4 = foreign; 5 = sect-vs-dem; 6 = sect-vs-secular; 7 = sect-vs-foreign (8-arm collapse of 12 raw conditions)
age	Integer	Age
female	Binary	1 = female, 0 = otherwise

Study 9: Costa (2021)

File name: costa-2020.csv

Label: ideology

Number of obs: 3,030

Number of items: 10

Type: partial

Arms: 9

Citation: Costa, M. 2021. “Ideology, Not Affect: What Americans Want from Political Representation.” *American Journal of Political Science* 65(2): 342–358.

DOI: <https://doi.org/10.1111/ajps.12571>

Ranking task: Respondents ranked ten policy issues; the data record the top-1 and 3rd-place positions (partial), with the remaining positions NA. **treat** is a 3×3 factorial.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
nationalsecurity, healthcare, education, jobs, crime, immigration, drugaddiction, socialsecurity, terrorism, environment	Integer	Rank of each policy issue (partial: top-1 and 3rd-place recorded; others NA)
ranking	String	Compact partial-rank summary
treat	Integer	0–8, a 3×3 factorial (see issue , quotecondition , issuecondition)
issue	String	Issue condition label
quotecondition	String	Quote-condition label
issuecondition	String	Issue-condition label
pid	String	Party identification
ideo	String	Ideology
gender	String	Gender
age	String	Age band
race	String	Race/ethnicity

Study 10: Dietrich (2016)

File name: deitrich-2016.csv

Label: aid

Number of obs: 222

Number of items: 5

Type: partial

Arms: 3

Citation: Dietrich, S. 2016. “Donor Political Economies and the Pursuit of Aid Effectiveness.” *International Organization* 70(1): 65–102.

DOI: <https://doi.org/10.1017/S0020818315000302>

Ranking task: Respondents ranked aid-delivery channels; only a subset of positions is recorded (partial), with other item columns NA. There is no traditional control arm, so `treat` is not 0-indexed (documented exception).

Note: the standardized file name (`deitrich-2016.csv`) carries a spelling of the author’s name that differs from the published “Dietrich.”

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>recipientgovernment</code>	Integer	Rank of the recipient government as an aid channel
<code>internationalorganization,</code> <code>internationalngos, localngos,</code> <code>privatesector</code>	Integer	Rank of each remaining aid channel (not fully recorded in released data; NA)
<code>ranking</code>	String	Compact partial-rank summary
<code>treat</code>	Integer	1/2/3 — three recipient/question conditions (no control arm; not 0-indexed)
<code>pe</code>	Numeric	Political-efficacy covariate

Study 11: Doshi, Kelley & Simmons (2019)

File name: doshi-2019.csv

Label: indicator

Number of obs: 150

Number of items: 4

Type: indicator

Arms: 3

Citation: Doshi, R., Kelley, J. G. & Simmons, B. A. 2019. “The Power of Ranking: The Ease of Doing Business Indicator and Global Regulatory Behavior.” *International Organization* 73(3): 611–643.

DOI: <https://doi.org/10.1017/S0020818319000158>

Ranking task: Investment professionals named the single organization whose ranking they most trust; stored as top-1 indicator dummies across four organizations (one pick per row; one row has no response).

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
worldbank, economist, heritagefoundation, brookings	Binary	1 = organization named most-trusted, 0 = otherwise
ranking	String	Compact top-1 indicator summary
treat	Integer	0/1/2 — question-framing arms
gender	String	Respondent gender
birth	Integer	Birth year
education	String	Education level
industry	String	Industry / role
strategy	String	Investment strategy
yearsofexperience	String	Years of professional experience (band)
edbknowledge	String	Whether the respondent had read the Doing Business report/ranking

Study 12: Egan (2014)

File name: `egan-2014.csv`

Label: something

Number of obs: 9,855

Number of items: 3

Type: full

Arms: 2

Citation: Egan, P. J. 2014. ““Do Something” Politics and Double-Peaked Policy Preferences.” *The Journal of Politics* 76(2): 333–349.

DOI: <https://doi.org/10.1017/S0022381613001527>

Ranking task: Respondents ranked three policy options (leftist / rightist / status quo) 1–3. Rows pool three CCES waves (2010/2011/2012); for the 2011 and 2012 waves the rankings are observational and `treat` = 0.

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>leftist</code>	Integer	Rank of the leftist policy option (1–3)
<code>rightist</code>	Integer	Rank of the rightist policy option (1–3)
<code>quo</code>	Integer	Rank of the status-quo option (1–3)
<code>ranking</code>	String	Compact 1–3 permutation
<code>treat</code>	Integer	0/1 (“do something” framing; 0 for all 2011/2012 observational rows)
<code>wave</code>	Integer	CCES wave (2010/2011/2012)
<code>issue</code>	String	Policy-issue label within the wave

Study 13: Fang & Li (2020)

File name: fang-li-2020.csv

Label: dispute

Number of obs: 2,160

Number of items: 7

Type: marginal

Arms: 16

Citation: Fang, S. & Li, X. 2020. “Historical Ownership and Territorial Disputes.” *The Journal of Politics* 82(1): 345–360.

DOI: <https://doi.org/10.1086/706047>

Ranking task: A single marginal rank per row (1–7) elicited under a factorial design; only the **defense** item’s rank is populated, with the other six item columns NA.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
defense	Integer	Marginal rank (1–7) of the defense item
economicdevelopment, socialstability, democracy, corruption, incomeinequality, environment	Integer	Other policy items (not recorded; NA)
ranking	String	Compact marginal-rank summary
treat	Integer	0–15, a 16-arm factorial (see historical, powerful, valuable, island)
historical, powerful, valuable, island	Integer	Factorial treatment-factor indicators
age, income, han, male, eastern, central, rural, college, soe, ccp, socialstatus, news	Numeric	Respondent demographics and background covariates

Study 14: Fielding (2018)

File name: fielding-2018.csv

Label: sentiment

Number of obs: 5,277

Number of items: 7

Type: partial

Arms: 2

Citation: Fielding, D. 2018. “Traditions of Tolerance: The Long-Run Persistence of Regional Variation in Attitudes towards English Immigrants.” *British Journal of Political Science* 48(1): 167–188.

DOI: <https://doi.org/10.1017/S0007123415000575>

Ranking task: A BES 2010 imaginary-AV ballot in which respondents ranked seven parties. Fielding’s reverse-coded 0–6 ordinals are converted to PRD rank positions (rank = 7 - value; 0 = 7th/unranked maps to NA). Only the UKIP and BNP positions are in the extract; the other five parties’ ranks are NA. Rows with no observed rank were dropped, leaving 5,277.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
ukip	Integer	Rank of UKIP (1 = top ... 6; NA if 7th/unranked)
bnp	Integer	Rank of the BNP (1–6; NA if 7th/unranked)
conservative, labour, liberal, democrat, greenrespectparties	Integer	Ranks of the remaining parties (not in the extract; NA)
ranking	String	Compact partial-rank summary
treat	Integer	0 = control; 1 = treatment (medieval “archa” town)
seat	String	UK parliamentary constituency
region	Integer	Region code
england-not-london	Integer	Indicator for England outside London
if-kids, if-beneficiary, if-graduate, if-low-quals, if-widowed, if-separated, if-divorced, if-single, if-female, if-religious	Binary	Respondent demographic indicators
age	Integer	Age

Study 15: Flavin & Hartney (2017)

File name: flavin-hartney-2017.csv

Label: education

Number of obs: 320

Number of items: 5

Type: full

Arms: 2

Citation: Flavin, P. & Hartney, M. T. 2017. “Racial Inequality in Democratic Accountability: Evidence from Retrospective Voting in Local Elections.” *American Journal of Political Science* 61(3): 684–697.

DOI: <https://doi.org/10.1111/ajps.12286>

Ranking task: Local school-board members ranked five education issues by urgency (full 1–5).

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
budgetfunding, teacherquality, learninggains, achievementgaps, commoncore	Integer	Rank of each education issue by urgency (1 = most urgent ... 5)
ranking	String	Compact 1–5 permutation
treat	Integer	0/1 (15 rows have missing <code>treat</code>)
teacher	Binary	Respondent is a teacher / teacher-affiliated
avghispgap	Numeric	District average Hispanic–white achievement gap
avgblkgap	Numeric	District average Black–white achievement gap

Study 16: Haas & Lindstam (2023)

Number of items: 4

Type: full

Arms: 3

Citation: Haas, N. & Lindstam, E. 2023. “My History or Our History? Historical Revisionism and Entitlement to Lead.” *American Political Science Review* 118(4): 1778–1802.

DOI: <https://doi.org/10.1017/S000305542300117X>

Ranking task: Full 1–4 leadership ranking of participant–candidate religion pairings, from a real-money group decision game. One parent file plus two pairwise splits.

File	Comparison	N
haas-lindstam-2023.csv	Full 3-arm design (neutral / inclusive / exclusive)	1,592
haas-lindstam-2023-inclusive.csv	neutral (0) vs. inclusive (1)	1,058
haas-lindstam-2023-exclusive.csv	neutral (0) vs. exclusive (1)	1,066

Labels: `history-inclusive` and `history-exclusive` (the two pairwise splits). The 3-arm parent `haas-lindstam-2023.csv` is a derived file, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>hindu-hindu, hindu-muslim, muslim-hindu, muslim-muslim</code>	Integer	Rank of each participant–candidate religion pairing (1 = most preferred leader ... 4)
<code>ranking</code>	String	Compact 1–4 permutation
<code>treat</code>	Integer	0 = neutral history; 1 = inclusive history; 2 = exclusive history
<code>gender, age, religion, state, city, urbanrural, caste, category, caste, schooltype, education, state_sec, year_grad, educationhigh, interest_pol</code>	Numeric	Respondent demographics and background (coded)
<code>round, comp, comp2</code>	Numeric	Group-game design variables

Study 17: Jacoby (2014)

File name: jacyby-2014.csv

Label: values

Number of obs: 805

Number of items: 7

Type: full

Arms: 1

Citation: Jacoby, W. G. 2014. “Is There a Culture War? Conflicting Value Structures in American Public Opinion.” *American Political Science Review* 108(4): 754–771.

DOI: <https://doi.org/10.1017/S0003055414000380>

Ranking task: Respondents produced a full 1–7 ranking of political values by sequential elimination. Observational (`treat` = 0).

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>freedom, equality, economicsecurity, morality, individualism, socialorder, patriotism</code>	Integer	Rank of each political value (1 = most important ... 7)
<code>ranking</code>	String	Compact 1–7 permutation
<code>treat</code>	Integer	0 (observational)
<code>gender</code>	Integer	Gender (coded)
<code>race</code>	Integer	Race/ethnicity (coded)
<code>educ</code>	Integer	Education (coded)
<code>pid3</code>	Integer	Party identification, 3-category
<code>ideo5</code>	Integer	Ideology, 5-category
<code>inputstate</code>	Integer	State of residence (code)

Study 18: Krupnikov & Levine (2019)

Number of items: 6

Type: full (partial in released data)

Arms: 5

Citation: Krupnikov, Y. & Levine, A. S. 2019. “Political Issues, Evidence, and Citizen Engagement: The Case of Unequal Access to Affordable Health Care.” *The Journal of Politics* 81(2): 385–398.

DOI: <https://doi.org/10.1086/701722>

Ranking task: Respondents ranked six policy issues by importance; only a subset of item positions is in the public data (others NA). One parent file plus four pairwise splits (control vs. each evidence format).

File	Comparison	N
krupnov-levine-2019.csv	Full 5-arm design	845
krupnov-levine-2019-humaninterest.csv	control (0) vs. human-interest story (1)	319
krupnov-levine-2019-statspct.csv	control (0) vs. statistics as percentages (1)	321
krupnov-levine-2019-statsn.csv	control (0) vs. statistics as counts N (1)	323
krupnov-levine-2019-statsdenom.csv	control (0) vs. statistics as N with denominator (1)	317

Labels: `issue-human` (human-interest story), `issue-stats` (statistics as percentages), `issue-counts` (statistics as counts N), and `issue-denom` (statistics as N with denominator). The 5-arm parent `krupnov-levine-2019.csv` is a derived file, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>federaldebt, unemployment</code>	Integer	Rank of the issue (where recorded)
<code>ineq, health, immigration, ethics</code>	Integer	Rank of the issue (not fully recorded in released data; NA)
<code>ranking</code>	String	Compact partial-rank summary
<code>treat</code>	Integer	0 = control; 1 = human-interest; 2 = stats %; 3 = stats N; 4 = stats N + denominator (42 rows missing <code>treat</code>)
<code>health_rank1</code>	Binary	Indicator that health care was ranked first
<code>import, personal, value, suffer, happy, healthexpenses</code>	Numeric	Attitudinal covariates
<code>male, female, income, education, nonwhite, partyid, dem_rep, age</code>	Numeric	Respondent demographics

Study 19: Lin-Greenberg (2023)

File name: linggreenberg-2023.csv

Label: escalation

Number of obs: 206

Number of items: 8

Type: full

Arms: 3

Citation: Lin-Greenberg, E. 2023. “Evaluating Escalation: Conceptualizing Escalation in an Era of Emerging Military Technologies.” *The Journal of Politics* 85(3): 1151–1166.

DOI: <https://doi.org/10.1086/723974>

Ranking task: Respondents (foreign-policy experts) ranked eight military actions by escalatory level (full 1–8; higher rank = more escalatory).

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
sofraid, sofraidonship, dronestrike, bomberattack, missilestrike, cyberattack, supporttoproxies, groundattack	Integer	Rank of each military action (1–8; higher = more escalatory)
ranking	String	Compact 1–8 permutation
treat	Integer	0/1/2 — scenario arms
gender, age, veteran, government, current_affiliation, political_id	Numeric	Respondent background covariates
current_affiliation_4_text	String	Free-text affiliation (where “other” selected)

Study 20: Malhotra & Kuo (2008)

Number of items: 7

Type: full

Arms: 4

Citation: Malhotra, N. & Kuo, A. G. 2008. “Attributing Blame: The Public’s Response to Hurricane Katrina.” *The Journal of Politics* 70(1): 120–135.

DOI: <https://doi.org/10.1017/S0022381607080097>

Ranking task: Full 1–7 blame ranking of Hurricane Katrina officials, from a cue-condition experiment. One parent file plus three pairwise splits.

File	Comparison	N
malhotra-kuo-2008.csv	Full 4-arm design	397
malhotra-kuo-2008-office.csv	control (0) vs. +office cue (1)	204
malhotra-kuo-2008-party.csv	control (0) vs. +party cue (1)	207
malhotra-kuo-2008-both.csv	control (0) vs. +office +party (1)	200

Labels: blame-office, blame-party, and blame-both (the three pairwise splits). The 4-arm parent malhotra-kuo-2008.csv is a derived file, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
unit	Integer	Unique observation ID
blanco, brown, bush, chertoff, landrieu, nagin, vitter	Integer	Rank assigned to each official (1 = most to blame ... 7)
ranking	String	Compact 1–7 permutation
treat	Integer	0 = names only; 1 = +office cue; 2 = +party cue; 3 = +office +party
form	Integer	Questionnaire form/version
female	Binary	1 = female
age	Integer	Age
educ	Integer	Education (coded)
ideology	Integer	Ideology (coded)
partyid3	Integer	Party identification, 3-category

Study 21: McCauley & Posner (2019)

File name: mccauley-posner-2019.csv

Label: religion

Number of obs: 197

Number of items: 6

Type: partial

Arms: 2

Citation: McCauley, J. F. & Posner, D. N. 2019. “The Political Sources of Religious Identification: Evidence from the Burkina Faso–Côte d’Ivoire Border.” *British Journal of Political Science* 49(2): 421–441.

DOI: <https://doi.org/10.1017/S0007123416000594>

Ranking task: Respondents identified their most/second-most important identities; stored as top-1/top-2 indicators across six identity categories.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
nationality, religion, ethnicity, occupation, gender, other	Integer	Rank/indicator of each identity (top-1/top-2; unranked = NA)
ranking	String	Compact partial-rank summary
treat	Integer	0/1 (border/country context)
village, country, country93, countryborn	String	Geographic identifiers
urban, male, age1827, age2845, age46+, resident, married, education	Mixed	Demographic covariates
migration block (birthvillage, migclose, migwin, migbfci, migoother, yearsatsite, post99migrant, cotetil2000, cote1993, coteborn)	Mixed	Migration-history variables
ethnicity block (lobi, gouin, mossi, senoufo, dioula, other ethnicity)	Binary	Ethnic-group indicators
religion block (muslim, christian, catholic, protestant, traditional relig, no relig)	Binary	Religious-affiliation indicators
solidarity block (sol, highsol, medsol, lowsol)	Mixed	Cross-border solidarity measures

Study 22: McMurry (2022)

File name: mcmurry-2022.csv

Label: philippines

Number of obs: 720

Number of items: 4

Type: full

Arms: 2

Citation: McMurry, N. 2022. “From Recognition to Integration: Indigenous Autonomy, State Authority, and National Identity in the Philippines.” *American Political Science Review* 116(2): 547–563.

DOI: <https://doi.org/10.1017/S0003055421001039>

Ranking task: Respondents produced a full 1–4 ranking of identity categories.

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
tribe, nationality, religion, gender	Integer	Rank of each identity (1 = most important ... 4)
ranking	String	Compact 1–4 permutation
treat	Integer	0 = control; 1 = identity treatment
age	Integer	Age
female	Binary	1 = female
completed_elementary	Binary	Completed elementary education
completed_hs	Binary	Completed high school
catholic	Binary	Catholic
evangelical	Binary	Evangelical

Study 23: Nair & Sambanis (2019)

Number of items: 4

Type: partial (marginal in released data)

Arms: 5

Citation: Nair, G. & Sambanis, N. 2019. “Violence Exposure and Ethnic Identification: Evidence from Kashmir.” *International Organization* 73(2): 329–363.

DOI: <https://doi.org/10.1017/S0020818318000498>

Ranking task: Identity ranking in which only the Indian-identity rank is in the public data; the other three items are NA (marginal within a partial design). One parent file plus four pairwise splits (control vs. each prime).

File	Comparison	N
nair-sambanis-2019.csv	Full 5-arm design	2,522
nair-sambanis-2019-protest.csv	control (0) vs. protest prime (1)	981
nair-sambanis-2019-growth.csv	control (0) vs. economic-growth prime (1)	989
nair-sambanis-2019-army.csv	control (0) vs. army prime (1)	1,032
nair-sambanis-2019-map.csv	control (0) vs. map prime (1)	1,026

Labels: kashmir-protest, kashmir-economic (economic-growth prime), kashmir-army, and kashmir-map (the four pairwise splits). The 5-arm parent nair-sambanis-2019.csv is a derived file, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
unit	Integer	Unique observation ID
indian	Integer	Marginal rank of Indian identity
kashmiri, religion, occupation	Integer	Ranks of the other identities (not recorded; NA)
ranking	String	Compact marginal-rank summary
treat	Integer	0 = control; 1 = protest; 2 = economic growth; 3 = army; 4 = map
age and age-band indicators (age_18_27, age_28_49, age_50_over, median_age)	Numeric	Age variables
gender, gender_female	Mixed	Gender
education block (education, education_class12, education_cat_*)	Mixed	Education variables
religion block (religion_sunni, religion_shia, religion_sikh, religion_hindu)	Binary	Religious-affiliation indicators
income block (main_earner, monthly_hhincome, hhincome_cat_*)	Mixed	Household-income variables

Study 24: Niemeyer et al. (2024)

File name: niemeyer-etal-2023.csv

Label: deliberation

Number of obs: 24

Number of items: 5

Type: full

Arms: 2

Citation: Niemeyer, S., Veri, F., Dryzek, J. S. & Bächtiger, A. 2024. “How Deliberation Happens: Enabling Deliberative Reason.” *American Political Science Review* 118(1): 345–362.

DOI: <https://doi.org/10.1017/S0003055423000023>

Ranking task: Small deliberative mini-public; participants produced a full 1–5 ranking of road-policy options pre- and post-deliberation (paired sample).

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
upgrade, maintain, close, dirtroad, stabalize	Integer	Rank of each road-policy option (1–5)
ranking	String	Compact 1–5 permutation
treat	Integer	0 = pre-deliberation; 1 = post-deliberation
gender	Integer	Gender (coded)
education	Integer	Education (coded)
age	Integer	Age

Study 25: Pedersen (2025)

File name: pedersen-2025.csv

Label: *(not among the 46 labeled datasets — see Section 3.1)*

Number of obs: 8,525

Number of items: 10

Type: full (derived)

Arms: 4

Citation: Pedersen, H. H. 2025. “Legislator or Representative? Politicians’ Tasks According to Voters.” *British Journal of Political Science* 56: e4.

DOI: <https://doi.org/10.1017/S0007123425101245>

Ranking task: Respondents (voters) allocated attention across ten legislative activities; ranks are derived from a time-allocation task, so ties are pervasive (flagged in Section 5). This file uses the **legacy layout** (ch_-prefixed item columns and an id column, no **ranking** string).

Variables

Variable	Type	Description
unit	Integer	Unique observation ID
id	Integer	Original respondent ID (legacy layout)
treat	Integer	0–3 — design condition
ch_legscrutiny, ch_negotiations, ch_parlmeetings, ch_oversight, ch_agendasetting, ch_localparty, ch_publicdebate, ch_presentself, ch_presentpolicy, ch_contactconstituency	Integer	Derived rank of each legislative activity (from time allocation; ties common)
age, gender, polinterest, leftright, trustmps	Numeric	Respondent demographics and attitudes

Study 26: Pradel et al. (2024)

Number of items: 4

Type: full

Arms: 6

Citation: Pradel, F., Zilinsky, J., Kosmidis, S. & Theocharis, Y. 2024. “Toxic Speech and Limited Demand for Content Moderation on Social Media.” *American Political Science Review* 118(4): 1895–1912.

DOI: <https://doi.org/10.1017/S000305542300134X>

Ranking task: Full 1–4 ranking of speech types. One parent file plus five pairwise splits.

File	Comparison	N
pradel-etal-2024.csv	Full 6-arm design	1,183
pradel-etal-2024-uncivil.csv	control (0) vs. uncivil (1)	395
pradel-etal-2024-intolerant.csv	control (0) vs. intolerant (1)	395
pradel-etal-2024-threatening.csv	control (0) vs. threatening (1)	397
pradel-etal-2024-threatening-new.csv	control (0) vs. threatening, new variant (1)	393
pradel-etal-2024-groupeffect.csv	non-group-related control (0) vs. control (1)	395

Labels: toxic-uncivil, toxic-intolerant, toxic-threat (threatening), and toxic-group (group-membership effect). The 6-arm parent `pradel-etal-2024.csv` and the redundant `pradel-etal-2024-threatening-new.csv` split are derived files, not among the 46 labeled datasets.

Variables (parent file)

Variable	Type	Description
unit	Integer	Unique observation ID
civil, uncivil, intolerant, threatening	Integer	Rank of each speech type (1–4)
ranking	String	Compact 1–4 permutation
treat	Integer	0 = control; 1 = non-group-related control; 2 = uncivil; 3 = intolerant; 4 = threatening; 5 = threatening (new variant)
treatment	String	Treatment-arm label
rank1	String	Speech type ranked first
pid, pid7	String	Party identification (3- and 7-category)
gender, agegroup, racecat_anes, educ	String	Demographics
anger, disgust	Numeric	Emotional-response measures

Study 27: Rathbun & Pomeroy (2022)

File name: rathbun-pomeroy-2022.csv

Label: morality

Number of obs: 1,245

Number of items: 9

Type: partial

Arms: 2

Citation: Rathbun, B. C. & Pomeroy, C. 2022. “See No Evil, Speak No Evil? Morality, Evolutionary Psychology, and the Nature of International Relations.” *International Organization* 76(3): 656–689.

DOI: <https://doi.org/10.1017/S0020818321000436>

Ranking task: Respondents ranked at least two of nine traits, so missingness is by design (partial). No control arm, so `treat` is not 0-indexed (documented exception).

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>fair, generous, honest, powerful, friendly, culture, resolved, organized, intelligent</code>	Integer	Rank of each trait (respondents ranked at least two; unranked = NA)
<code>ranking</code>	String	Compact partial-rank summary
<code>treat</code>	Integer	1 = individuals; 2 = countries (two cross-cutting groups; no control arm)
<code>condition</code>	String	Condition label

Study 28: Searing, Jacoby & Tyner (2019)

File name: searing-et al-2019.csv

Label: principles

Number of obs: 150

Number of items: 9

Type: full

Arms: 2

Citation: Searing, D. D., Jacoby, W. G. & Tyner, A. H. 2019. “The Endurance of Politicians’ Values Over Four Decades: A Panel Study.” *American Political Science Review* 113(1): 226–241.

DOI: <https://doi.org/10.1017/S0003055418000692>

Ranking task: British MPs produced a full 1–9 ranking of political values in a two-wave (1973/2013) panel; `treat` marks the wave. Only rows that are a valid full 1–9 permutation are retained (150 of the reshaped rows).

Variables

Variable	Type	Description
<code>unit</code>	Integer	Unique observation ID
<code>authority</code> , <code>community</code> , <code>econequality</code> , <code>freedom</code> , <code>freeenterprise</code> , <code>property</code> , <code>socialequality</code> , <code>socialhierarchy</code> , <code>unity</code>	Integer	Rank of each political value (1–9)
<code>ranking</code>	String	Compact 1–9 permutation
<code>treat</code>	Integer	Panel wave (0 = 1973; 1 = 2013)
<code>party</code>	Integer	MP’s party (coded)

5. Data Quality Notes

5.1 Missing Values

- NA values are expected in **partial**, **marginal**, and **indicator** files: only the elicited positions carry ranks; the rest are NA (or - in the **ranking** string). Percent-missing per file is recorded in `output/validation_table.csv`.
- Some demographic covariates have missing data. Missing values are represented as NA in the CSVs.

5.2 Data Structure Variations

- **Dietrich (2016)**: long format; **treat** coded 1/2/3 (no control arm).
- **Rathbun & Pomeroy (2022)**: **treat** coded 1/2 (two cross-cutting groups, no control arm); design-driven missingness (respondents rank ≥ 2 of 9 traits).
- **Niemeyer et al. (2024)**: small pre/post paired deliberative sample.
- **Egan (2014)**: three CCES waves stacked; observational rankings in the 2011/2012 waves.
- **Legacy-layout file**: `pedersen-2025.csv` retains `ch_`-prefixed item columns and an `id` column and has no **ranking** string; it is an aggregate/derived ranking rather than a respondent-level permutation.
- **Most others**: wide format, one row per respondent.

5.3 Files with Open Validation Flags

File	Flag	Status
<code>pedersen-2025.csv</code>	Pervasive ties (time-allocation percentages) $\rightarrow$ not uniquely reshapeable	Under discussion; treated as an inferred/aggregate ranking

5.4 Treatment Coding

Most datasets use 0-indexed treatment variables (0 = control; 1, 2, 3 ... = treatment arms). Documented exceptions with no traditional control arm are Dietrich (2016) and Rathbun & Pomeroy (2022), which use 1-indexed condition labels. A small number of files have missing **treat** for a few rows (Flavin & Hartney, Krupnikov & Levine).

5.5 Ranking Scales

- **full**: ranks 1..J with lower numbers indicating higher preference/priority/blame (study-specific direction).
- **partial**: only the top- m positions are recorded (1.. m), remaining items NA.
- **indicator**: 0/1 top-1 (or top- k) selection dummies.
- **marginal**: a single meaningful item rank per row.

Every full/partial file passes the round-trip check (rank $\rightarrow$ ordering $\rightarrow$ rank) except `pedersen-2025.csv` (a derived time-allocation ranking with pervasive ties, documented above).

6. Version History

- **v0.0.8** (2026-07-14): Initial codebook.
